

BMW GROUP LOGISTICS HALL

The impressive new facility for the BMW Group in Swindon will measure approximately 100m long and 94m wide on completion. There's also a single storey lean-to logistics canopy and 'link' structure constructed alongside the warehouse.

Our main involvement on the project has been the provision and installation of 328 tonnes of steelwork to site – along with additional services such as full frame design and connection design and fabrication - to name a few. The project was erected over a 4 week period.

FEATURES

- **Frame & Connection Design**
- **Detailing, fabrication and erection of Structural Steelwork**
- **Cold-Rolled Rails**

SUMMARY

CLIENT: Glencar Construction
