

DOMINO'S PIZZA - PRODUCTION FACILITY

MetStructures were contracted to undertake structural works on Domino's Pizza production facility where existing steel columns and trusses needed to be strengthening.

MetStructures fixed new stiffening angles and channels to the steelwork and also supplied and installed new plat support steel between the existing trusses. The scope also included the forming of new logistics and personnel doors.

FEATURES

- Detailing, fabrication and installation of strengthening steelwork to existing steel & new plant support steel

SUMMARY

CLIENT: TSL Projects
PROJECT TYPE: Structural strengthening
PROJECT LOCATION: Scotland
STEEL TONNAGE: 28 tonnes
