

LON1 DATA CENTRE, LONDON

MetStructures were contracted by TSL Projects as their steelwork contractor for their LON1 project, which was to re-purpose an existing warehouse and convert it into a new Data Centre.

The existing structure required façade retention and the installation of a double storey ‘beam and column’ structure tied back to the retained façade. The scope of works also saw **MetStructures** design and install a new parapet extension, chiller platform on the roof and a new generator structure to the side of the warehouse.

FEATURES

- Detailing, fabrication and installation of façade retention steel
- New plant room within existing structure
- Parapet steel

SUMMARY
